

BRONSON'S **GREEN**

Bronson's Green turf pigment is used to restore the natural green color back to turf during dormancy or dry periods. It may be applied on greens, fairways, tee boxes and roughs.

Bronson's Green is an eco-friendly, organic colorant that contains no hazardous chemicals known to be harmful to turf. This product is made with binders specialized for turf adhesion.

Directions and Recommended Rates

Bronson's Green may settle over time, agitate well before mixing. Cut turf to desired height and remove grass clippings before supplying pigment. The most commonly used rate is 10-25 oz. per acre. Allow colorant to mix completely with water before adding fertilizers, pesticides or fungicides.

Equipment Recommendations

For best results use sprayer at low to medium pressure. This product will stain concrete, plants, stones, sidewalks and other objects. If accidental overspray occurs, use water and soap mix with a scrub brush immediately. Teflon seals are recommended to help prevent leaks when using centrifugal pumps.
