F o a m e r

CONCENTRATED FOAM MARKER

A blend of specialty surfactants and other additives designed to produce thick long lasting foam. It will work over a range of water hardness to produce a thick long lasting foam.

Application Guidelines

Rate of use: Foamer can be used at varying rates, depending upon the desired consistency of foam.

For firmer foams use at 1 part Foamer to 80 parts water.

For normal foams use at 1 part Foamer to 100 parts water.

The air pressure may need to be adjusted to produce a thick, fine bubble foam. If the foam produced is too sloppy, increase the level of **Foamer** and / or the level of air.

It is best applied in large blobs to the ground surface to give the most visual effect.
